

Workforce Services

Delivering IT resources for your staffing needs.

When you need skilled IT resources for complex projects, large-scale, iterative deployments or short-term tasks to fill gaps, Pivot Workforce Services delivers the right resource to get the job done.

Overview

Finding the right fit for any organization starts with understanding the technical requirements of the job and the internal culture of the organization. Pivot Workforce Services takes a partnership approach with our clients; first we identify your hiring goals and challenges so we can be a value-added resource. We have a very disciplined process that allows us to prioritize our client needs and provide the right match. Pivot has taken the knowledge and expertise gained and applied it to creating a staffing solution that meets your technical requirements and cultural needs.

Staffing Options

We solve the problem of finding the best IT talent within our substantial network to support our clients' staffing needs:

- **Contract:** Perfect when you need resources, but have no FTEs budgeted, require specialized skill sets for the short term or are facing an expedited drop date or product launch.
- **Contract to Hire:** Ideal for "trying out" a new employee to ensure you have the right fit; also a good approach when FTE budget is forecasted in the future, but needed now.
